IEO	Energy	Our Daily ETF Trend reports provide both traders and long-term investors alike with a unique tool to quickly identify which areas of the market are attractive and which ones to stay away from. A different set of ETFs is published each day of the week to cover indices, sectors, groups, styles, commodities, currencies, fixed income, and international markets. Using a proprietary trend and timing score, we code each ETF based on its current trading pattern. Long-term investors can use this tool to determine when to enter or exit a position, and active traders can use it to identify potential trade setups. The report is also an easy way to stay on top of the multitude of ETFs offered today.	0.00	↑	Good
